

Annotation of Press releases Articles

Johannes Strickner

Supervisor: Univ.-Prof. Dr. Dieter Fensel

Topic description

Description

Syntactic and semantic annotation of press releases from <http://press.mayrhofen.at>

Approach

- Created a list of the press releases that need to be annotated (about 50)
- Syntactic annotation (Article: headline, publisher, url, datePublished, dateModified, dateCreated, inLanguage)
- Created a list of press releases that need semantic annotation (Event, MusicEvent, SportsEvent with dates in the future, only 4)
- Semantic Annotation
- Each press release has its own json file

Challenges

- The press releases lack certain information for a more detailed annotation
 - Author of the press release
 - Events are poorly described
 - Missing locations
 - Missing time

Thank you for your attention
